Method and system for the automatic loading of air transport units

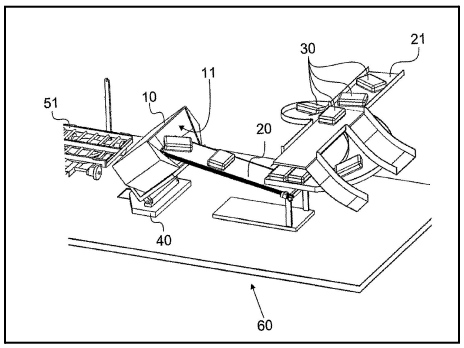

Patent Summary

The invention acts as a system and method for automatic loading of air transport units. The air transport unit 10 is tilted in accordance to the side of the loading opening, and uses an elevated sliding method, so that the goods transported from piece 30 travel to 10 and then deported to the packing location at 60.

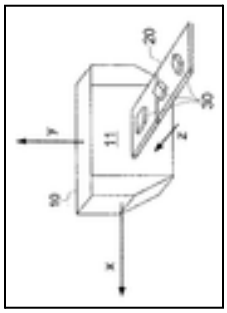

Patent Critique

I like the slider technique; in fact, I wanted to implement a horizontal escalator technique to help deport the cargo into the habitat smoothly. However, this invention takes advantage of positioning and doesn't utilize motor run escalators. While this may work for this stationery innovation, for our robot using a motor run slider may be more efficient.
