Patent Number

US11305897B2

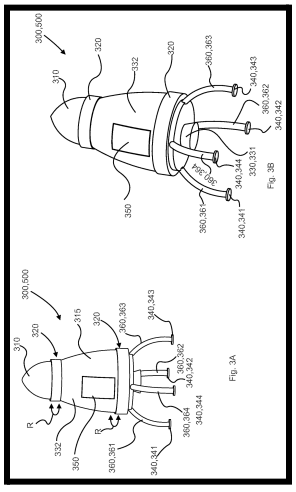

Patent Summary

This patent details a full moon complex, including the orbiting docking spacecraft and transportation vehicles that travel to and from the moon and the Earth, and vehicles to travel on the surface of the celestial bodies. The complex contains large personnel/cargo transport ideas within it. It's immensely beneficial to refuel and to use as a transport base for any transportation between the Earth and the Moon.

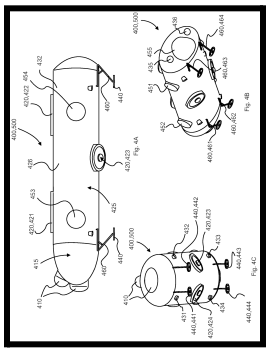

Patent Critique

This patent focuses primarily on the transportation between the Moon and the Earth, while our HUNCH project focuses on transportation on the moon, not between Earth. However, the ideas presented on containing the cargo and efficiently transporting it can be used for our project.
