Product Summary Sheet - Previous Solution 3

Source (Website or Store Location)

https://www.nasa.gov/commercial-lunar-payload-services/

Product Summary:

NASA's Commercial Lunar Payload Services initiative is a contract where NASA buys payload transportation from private US companies. It accepts higher mission risks for better affordability, rapid iterations, and a much more commercial lunar economy. The lunar surface cargo transport functions in a 3-phase workflow to handle moving payloads across the Moon.

Product Critique:

This product primarily deals with the entire commercial systems, in which the cargo transports are only a smaller part of it. Since the system is focused on the commercial business, it doesn't exactly deal with the intricacies of transporting cargo. However, the workflow process will be helpful for our design.
