Research Summary Sheet - Article #3

Complete the following form for each artifact that validates your problem statement.

Source (APA format and include a link to the source)

NASA. (2023, June 2). *The Space Shuttle - NASA*. NASA; NASA.

https://www.nasa.gov/reference/the-space-shuttle/

https://www.nasa.gov/reference/the-space-shuttle/

Artifact Summary

This article talks about different parts of the space shuttle (main engine, orbiter, external tank, solid rocket booster) and how each plays an important role in delivering cargo. It also included facts regarding how long the mission may take, number of crew members on board, as well as launched records. Mentions how due to weight reduction, the cost of producing the shuttle has decreased and through continuous improvement they become safer to fly in; the article provides examples of how the crew model, flight deck, and quarters were improved to be more efficient.

Artifact Critique

Overall I learned more about how regular spaceshuttles work, and how different parts of the spacecraft contribute to the journey into space, but this article relates more to crew shuttles rather than cargo transport shuttles therefore it's not directly important for my project.

Reliability

This article is published on the NASA website, and updated this year. The NASA website is credited for being a reliable source of information regarding space missions thus this article is a reliable source of information rewarding improvements in space shuttle technology.
