Research Summary Sheet - Article #4

Complete the following form for each artifact that validates your problem statement.

Source (APA format and include a link to the source)

Day, M. (2026, August 30). *6 horrifying ways to die on the Moon: The biggest hazards facing NASA's permanent base*. BBC Science Focus Magazine. https://www.sciencefocus.com/space/6-ways-die-moon

https://www.sciencefocus.com/space/6-ways-die-moon

Artifact Summary

This article talks about the dangers of living on the moon. It goes more into depth regarding how the atmosphere on the moon doesn't protect us from harmful radiation, how lunar dust is razor sharp and can pose risks to the lungs and eyes, and how if you lose pressurized air you could blackout and die in 90 seconds. This article mainly criticizes the human desire for lunar settling and how the moon was not designed for humans.

Artifact Critique

I love how the article actually provides detailed reasons as to why walking and living on the moon is dangerous even when humans wear pressurized suits and EVAs, but I worry about how accurate the information in the article truly is as it is not an academic source.

Reliability

This article was published on science docs, which is a mass media magazine written for the general public. It tries to maintain reputable journalism standards and is often fact checked by real scientists and experts, however it is not an academic or primary source.
