Research Summary Sheet - Article 2

Complete the following form for each artifact that validates your problem statement.

Source (APA format and include a link to the source)

Howard, R., Gomez, J., & Gill, T. (2022). *Surface transportation of the common habitat from lander to habitation zone*.

https://ntrs.nasa.gov/api/citations/20220018787/downloads/Surface%20Transportation%20of%20the%20Common%20Habitat%20from%20Lander%20to%20Habitation%20Zone.pdf

Artifact Summary

The article explains studies on how a lunar habitat could be moved from a lander to a habitation zone. Various transportation systems are mentioned and compared, identifying challenges such as offloading and remote operations. This relates to my HUNCH project since I'm dealing with lunar cargo transport from the lander to habitat.

Artifact Critique

This source is relevant since it directly examines lunar surface transportation and the obstacles of transporting cargo across the terrain. For my HUNCH project, the strongest point would be the comparison of several transportation systems, since I could research those to get a better understanding of my robot. However, the article deals with transporting a heavy habitat as opposed to small cargo.

Reliability

The authors work at NASA Johnson Space Center and NASA Kennedy Space Center, giving them credibility due to their experience with spacecraft transportation systems. This was presented at the 2023 IEEE Aerospace Conference, and the site was found on NASA NTRS.
